

## FMM - Your advantages

### FMM manages your data

- Storage of equipment resources including master and individual data
- Direct assignment of maintenance activities
- Analysis of service history and reports

### FMM coordinates spreading to areas

- Look-ahead planning of all maintenance activities
- Coordination of machine load according to maintenance and inspection activities
- Economical assignment of the service team

### FMM documents the costs

- Transparent cost reports of all maintenance activities
- Maintenance costs as base for investment decisions
- Management of spare part lists

## FMM at a glance

- Planning, documentation and management of accident prevention measurements
- Online requisition of unplanned failures (example: machine breakdown)
- Predefined maintenance plans
- Definition of maintenance intervals
- Acquisition of all maintenance costs
- Management of spare part lists

## TDM Facility & Maintenance Management

Preventive Maintenance of facilities & production resources

Service

Maintenance

Inspection

# FMM - Structured Maintenance Management

- Management of industrial facilities like machines, lifts, cranes as well as production resources
- Detailed description of the equipment including master and individual data
- Management of efforts for safety control and accident prevention
- Storage and allocation of service reports & inspection results
- Integrated service planner: efficient coordination of service teams and management of unscheduled service requisitions
- Scheduling of services according to due dates
- Transparent cost management: budgeting of all services

## How to manage services with FMM Example: machine tool

### Example: machine tool

Inventory No. 3  
Inventory No. 2  
Inventory No. 1  
Example: Hüller Hille

Planning of maintenance activities:  
- Planning of due maintenances  
- Unplanned service requisitions

Performing of the work according to the specific plan

Confirmation and determination of new inspection date

**Siegfried Finkbeiner, production manager at ARBURG about the development target with FMM:**

„It was important for us to get a software which is capable to manage all complex maintenance processes in a clear way – from scheduled activities to unscheduled services.“
